Distribution: Through an exhaustive network of ACE sales teams and distributors in Continental Europe, South America, Africa and the Middle East (see www.acecontrols-int.com and www.ace-ace.de)

We absorb the shock, so you don't have to

Picture: ACE/Bosch Rexroth AG

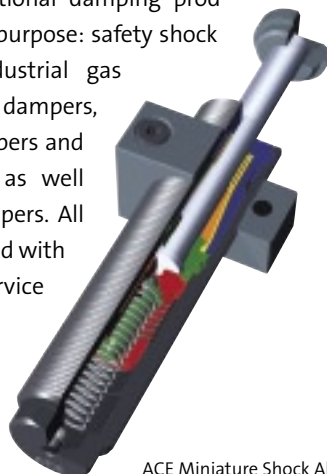

For a good 40 years, ACE has been convincing customers with well thought out solutions and valuable innovations revolving around industrial shock absorbers. These products are widely used in future-oriented companies since there is no better solution to decelerate moving objects in production or transportation. Shock absorbers provide for the smallest amount of braking force and shortest stopping time because, unlike other methods of energy absorption, they stop moving masses with constant linear deceleration. You benefit from: more compact constructions, faster production processes, increased operating lifetime, safer equipment, reduced maintenance costs, less energy expenses, lower noise pollution.

ACE MAGNUM Industrial Shock Absorbers

Top products improved by service

Apart from industrial shock absorbers, ACE develops, manufactures and distributes a complete range of additional damping products for every purpose: safety shock absorbers, industrial gas springs, rotary dampers, hydraulic dampers and feed controls as well as profile dampers. All this is combined with exemplary service

ACE Miniature Shock Absorber SC²

coming from the company's engineers and an exhaustive network of ACE sales teams and distributors in Continental Europe, South America, Africa and the Middle East. What's more, the company offers free-of-charge training at interested companies and colleges. A free 3D-CAD-library with sizing software on CD-Rom is another big help. ACE completes its service with a main 132-page catalogue full of products, accessories, prices and applications.
